

An experienced partner for New Start-up and Scale-Up Process Design offering a strong foundation for growing manufacturers

Small and first-time food producers now have greater chances of success than ever before. Whether you are industrializing a kitchen-top process, scaling up to commercial size, or making your first break into food manufacturing, Wright Process can help.

Start-ups and scale-ups can quickly be overwhelmed by technicalities. Wright Process can guide you through all elements of process design, from exploring food regulations to optimizing operational nuances. As a licensed general contractor with an in-house engineering team, we know how to get things built and running. Beyond the actual food process lives all the details that can make or break a project - our depth of knowledge extends into this realm of utilities, power, infrastructure, waste water, and beyond.

Wright Process Systems: Your partner for growth

Our new plant design and construction services include:

- Process evaluation and feasibility studies
- Product review and testing for industrialization
- Regulatory review and submittal to governing bodies
- Full process and utility design
- Equipment and service specifications
- Zoning, planning, construction, fire, and building permit submittals
- Conceptual 2D and 3D CAD designs and modeling
- Full general construction, including all trades
- Process and utility installation
- Single point of management for full project
- Vendor, subcontractor, and supplier management
- Cross-industry experience that can bring better approaches than traditional methods

WRIGHT

Process Systems

Engineering • Installation • Service

A friendly and personal project development process

Our work on projects always starts with a conversation. We begin by fully understanding your needs and business culture, and then help you achieve your goals. Throughout the process, we are always here to provide support.

Your partner for the entire project

Wright Process engineers work through the design and development of a project, and continue to directly oversee field construction and installation. Once installed, we commission, validate, and fully start-up your new process shoulder to shoulder with your operators. Then after your facility is operational, we stay engaged to smooth out details, obtain sign-offs from regulators, and take your picture with your first sellable product in hand!
